PURPOSE

This document describes the process used by Tissue Typing laboratories for organ donor test results and matching processes in OrganMatch.

The deceased organ donor record is created in OrganMatch through a transfer of data from the Electronic Donor Record (EDR).

For further information, refer to [Deceased Donor Enrolments - Laboratory Portal, OM-042](#).

1. TEST RESULTS

A deceased organ donor requires HLA typing and ABO results to be authorised prior to matching. Refer to Appendix 1 for readiness criteria.

The test results are added to the person record via the **Samples & test results** section.

> Samples & test results

The HLA typing results should be entered as 1 field unless they are the exception where the HLA antigen group is the same but there are serological differences. For example, B62 is authorised as B*15:01 and B75 is authorised as B*15:02. Table 1 below lists the HLA antigen exceptions in OrganMatch.

For further information on result entry, refer to [Result Entry and Authorisation- Laboratory Portal, OM-055](#).

A laboratory report can be generated withholding the donors name if deidentified results require reporting (for example results to be reported for a New Zealand recipient).

For further information refer to [Report Generation- Laboratory Portal, OM-007](#).

Table 1: HLA antigen groups managed as exceptions in OrganMatch

	HLA Antigen Group	HLA used for Matching
HLA-A	A3	A*03:01, A*32:04
HLA - B	B14 (B64, B65)	B*14:01, B*14:02
HLA - B	B15 (B62, B75, B72, B76, B77, B63, B71)	B*15:01, B*15:02, B*15:03, B*15:12, B*15:13, B*15:16, B*15:18
HLA - B	B40 (B60, B61)	B*40:01, B*40:02
HLA - C	Cw3 (Cw9, Cw10)	C*03:03, C*03:04
HLA - DRB1	DR1 and DR103	DRB1*01, DRB1*01:03
HLA - DRB1	DR3 (DR17, DR18)	DRB1*03:01, DRB1*03:02
HLA - DQB1	DQ3 (DQ7, DQ8, DQ9)	DQB1*03:01, DQB1*03:02, DQB1*03:03

2. MATCHING DONORS WITH RECIPIENTS ON THE TRANSPLANT WAITING LIST (TWL) PATHWAY

When a recipient is Active and Ready they can be matched against a donor immediately. A kidney recipient is no longer required to have a current serum on a crossmatch tray to be matched in the algorithm.

2.1 MATCHING A DONOR

1. From a donor’s **Match profile** expand the **Enrolments for transplant** section

When changing the **Matching OM Lab**, the below conformation box will popup.

- From the **Organ Program** list, select the program to match. This list is based on the organs available in the donor enrolment.

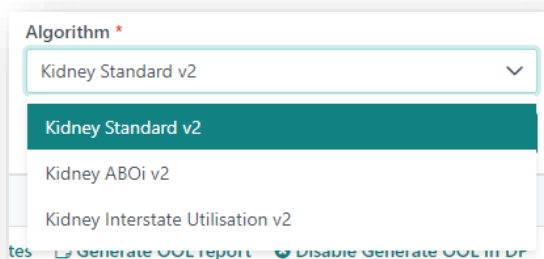

- The **Type of Matching** list defaults to Algorithm matching but Match profile comparison is also available from the dropdown.

See [3. Matching Donors with Recipients via Match Profile Comparison](#).

- From the **Algorithm** list, select the algorithm to be run. Repeat this process to run each algorithm.

8. Click **Match**.

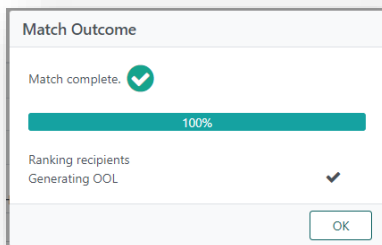

Note: Once the user has clicked on the Match button in the TWL matching screen, it will be disabled while the match is in progress.

The button will be enabled once the match is complete.

9. The matching progress is displayed.

10. Click **OK** when matching is complete.

If the following error occurs, rerun the match.

11. Proceed to **Section 6. Transplant Waiting List Matching Screen.**

2.2 MATCHING KIDNEY INTERSTATE UTILISATION OR ABOi ALGORITHMS

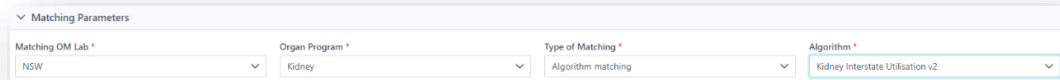

The interstate utilisation or ABOi algorithms may need to be matched when there are too few recipients on the standard algorithm or a kidney needs to be allocated interstate. If there are match event assessments completed on the standard algorithm, the data will be carried over when rematching the two other algorithms, meaning these match event assessments will not need to be completed again.

1. From a donor's **Person details**, click **View TWL Match**.

A rectangular button with a white background and a teal border. It contains a teal document icon followed by the text "View TWL Match" in teal.

2. Select Kidney from the **Organ Program** dropdown and Kidney Interstate Utilisation v2 or Kidney ABOi v2 from the **Algorithm** dropdown.

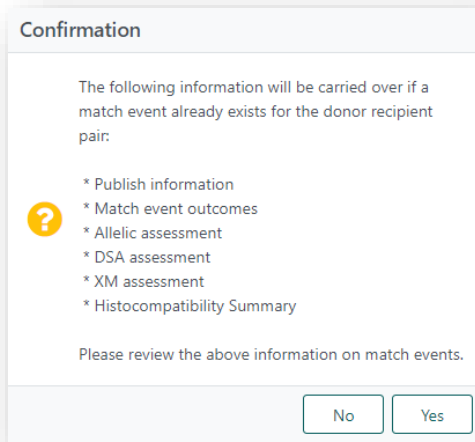

A screenshot of a "Matching Parameters" form. It contains four dropdown menus: "Matching OM Lab" (selected: NSW), "Organ Program" (selected: Kidney), "Type of Matching" (selected: Algorithm matching), and "Algorithm" (selected: Kidney Interstate Utilisation v2).

3. Click **Match**.

A rectangular button with a teal background and white text that says "Match".

- A confirmation box will pop up listing the information that will be carried over in the match event. Click **Yes**.

- Proceed to [Section 6. Transplant Waiting List Matching Screen](#).

2.3 REMATCHING A DONOR

There are instances where a donor needs to be rematched if the HLA typing or the KDPI has been updated. If rematching occurs all previous results will be replaced, and the match event assessments will need to be completed again.

- From a donor's **Person details**, click **View TWL Match**.

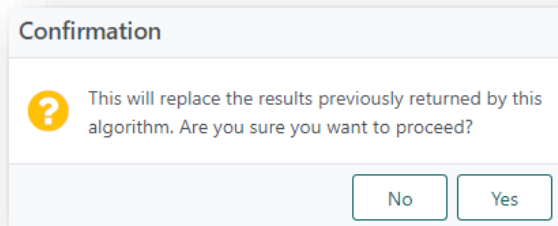

- Select the **Matching Parameters** for the organ to be rematched.

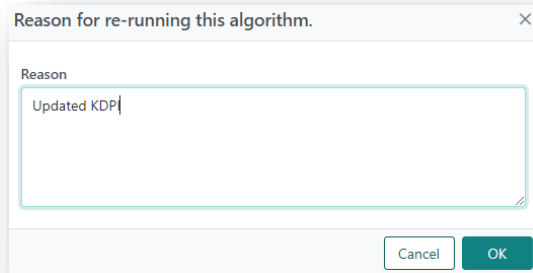

3. Click **Match**.

4. A confirmation box will pop up to warn the user that results will be replaced. Click **Yes**.

5. Add the **Reason** for rerunning the match and click **OK**.

6. Proceed to [Section 6. Transplant Waiting List Matching Screen](#).

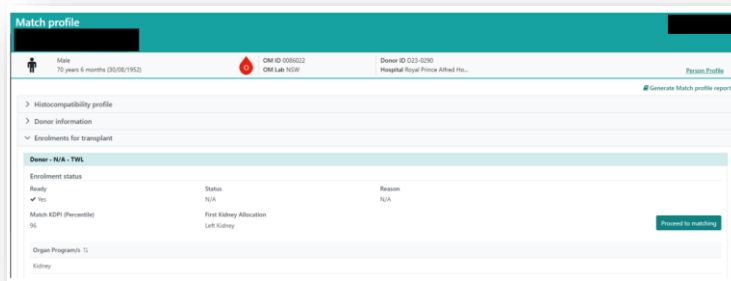

3. MATCHING DONORS WITH RECIPIENTS VIA MATCH PROFILE COMPARISON

The match profile comparison function enables recipients to be selected for a comparison between donor and recipient match profiles.

For Match Profile Comparisons to be run:

- The donor needs to be enrolled in an organ program and ready.
- The donor and recipient need to be enrolled on the TWL pathway.
- The recipient does not need to be ready and can be on hold.

1. From a donor's Match profile expand the Enrolments for transplant section

2. Check the donor is ready for matching. If there is a cross (x) under **Ready**, return to the **Person Profile** and click on the cross on the enrolment to view the reasons.

3. Click Proceed to matching.

4. The **Matching OM Lab** default to the users lab but can be changed from the dropdown selection

5. From the **Organ Program** list, select the program to match. This list is based on the organs available in the donor enrolment.

6. From the Type of Matching list, select **Match profile comparison** and click **Select recipients**.

- All recipients enrolled in the organ program selected will be displayed in the **Recipient List**. The list of recipients can be filtered using the below criteria.

The screenshot shows a 'Recipient List' window with a 'Filters' section and a table of recipients. The filters are set to: OM Laboratory: NSW, Transplant Hospitals: All, ABO: All, Ready: All, and Status: All. The table has 102 records found and includes columns for Include, Last Name, First Name, DoB, OM ID, OM Lab, Transplant Hospital, ABO, Ready, and On Hold Reason.

Include	Last Name T1	First Name T1	DoB T1	OM ID T1	OM Lab T1	Transplant Hospital T1	ABO T1	Ready T1	On Hold Reason T1
<input type="checkbox"/>	[REDACTED]	[REDACTED]	19/12/1961	0083496	NSW			✘	Waiting for hos...
<input type="checkbox"/>	[REDACTED]	[REDACTED]	15/10/1964	0080049	NSW	St Vincent's Ho...	A	✔	
<input type="checkbox"/>	[REDACTED]	[REDACTED]	23/10/1954	0082633	NSW	St Vincent's Ho...	O	✔	

- Select the recipients you wish to include in the **Match profile comparison**.

This screenshot shows the same 'Recipient List' window as above, but with the checkboxes in the 'Include' column for the first two recipients selected (checked).

- Click **Save**.

The screenshot shows two buttons: 'Cancel' and 'Save'. The 'Save' button is highlighted in a darker teal color.

- Click **Match**.

The screenshot shows a single button labeled 'Match' in a teal box.

Note: Once the user has clicked on the Match button in the TWL matching screen, it will be disabled while the match is in progress.

The button will be enabled once the match is complete.

11. The **Match event** row is added above the rows created via algorithm matching.

Organ Program	Algorithm	Rank	Score	Last Name	First Name	OM Lab	DoB	Age(Years)	Compatibility Status	Transplant Hospital	Published Status
Lung	Match Profile Comparison	-	-					66	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Match Profile Comparison	-	-					57	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Match Profile Comparison	-	-					41	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Match Profile Comparison	-	-					69	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Match Profile Comparison	-	-					58	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Lung Standard v1	-	6.114800					36	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published
Lung	Lung Standard v1	-	6.114500					69	For assessment by Transplant Unit	Alfred Hospital - Lung Unit	Published

12. Proceed to [Section 6. Transplant Waiting List Matching Screen](#).

4. MATCHING INCREASED VIRAL RISK DONORS

Deceased donors can be designated Increased Viral Risk when certain risk behaviours exist in their history. These donors are allocated only to recipients who have specifically consented to these transplants.

Note: There are jurisdiction variations in process for using this functionality in OrganMatch.

When allocating an IVR donor, it is necessary to run the allocation without the IVR setting first to see if there are any recipients allocated under the National algorithm (as described in [Principles of Kidney Matching Algorithms, OM-012](#)). If there are, these National patients must have a DSA assessment completed and included on the list. The remaining recipients must then be assessed for consent to the IVR register. Any recipients that have not consented are excluded from the list with the selection of IVRD- Recipient not Consented from the **Not Compatible Reason** dropdown.

4.1 MATCHING INCLUDES NATIONAL RECIPIENT

1. Complete the Histocompatibility assessment for all recipients matching via the National Algorithm. For further information, refer to [OM-008 Match Event Assessments- Laboratory Portal](#).

[> Histocompatibility assessment](#)

- For all state matched recipients review the Extended Accepted criteria in Match Parameters.

- If the **Accept Increased Viral Risk** is **Yes**, continue with the Histocompatibility assessment as per step 1. If the **Accept Increased Viral Risk** is **No**, select the **Compatibility Status** as Not Offered- Not Compatible and select IVRD- Recipient not Consented from the **Not Compatible Reason** dropdown. Refer to Appendix 2 for not compatible reasons.

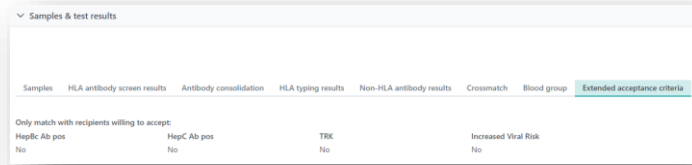

4.2 NO NATIONAL RECIPIENTS MATCHED

If there are no national recipient matches the donor is rematched against recipients willing to accept a donor with increased viral risk.

- Go to the **Person details** and click **Samples & test results**.

> Samples & test results

- Click the **Extended acceptance criteria** tab.

- Click **Edit** and select **Yes** for **Increased Viral Risk**.

- Click **Save**.

- A notification is generated to the Laboratory Portal to Verify Increased Viral Risk.

- A second user is required to verify **Increased Viral Risk**. Click on **Samples & test results** and click the **Extended acceptance criteria** tab.

- Click **Edit** and click **Verify/unverify**.

- In the **Verify/unverify Extended Acceptance Criteria** pop up, tick the **Verified** check box and click **Submit**.

- The donor is ready to be rematched against recipients willing to accept an increased viral risk donor.

10. Refer to

11.

2. Matching Donors with Recipients on the Transplant Waiting List (TWL) Pathway to proceed to matching.

5. MATCHING A DOMINO DONOR

A domino donor occurs when a recipient requiring a lung transplant (Recipient 1) receives a heart and lung from a deceased organ donor. Recipient 1 then donates their heart to Recipient 2 who requires a heart transplant. A new enrolment is added for Recipient 1 and Recipient 2.

- Go to the **Person details** for Recipient 1 and click on **Program enrolments**.

- Click **Add Enrolment**.

- Select **Donor** for **Transplant Role**, **Living Directed** as **Donor Type**, **Heart** as **Organ Program** and **LDD** as **Pathway**.

 A screenshot of a web form titled "Add Enrolment". The form contains the following fields:

- Enrolment information** section:
- Transplant Role ***: Radio buttons for "Recipient" and "Donor" (selected).
- Donor Type ***: A dropdown menu with "Living Directed" selected.
- Organ Program ***: A dropdown menu with "Heart" selected.
- Status**: Radio buttons for "On Hold" and "Active" (selected).
- Reason ***: A dropdown menu with "In Progress" selected.
- Pathway**: A dropdown menu with "LDD" selected.

- Click **Save**.

- Go to the **Person details** for Recipient 2 and click on **Program enrolments**.

- Click **Add Enrolment**.

7. Select **Recipient** for **Transplant Role**, **Heart** as **Organ Program** and **LDD** as **Pathway**.

Add Enrolment

Enrolment information

Transplant Role * Recipient Donor Donor Type * N/A

13. Click on the Heart LDD enrolment, click **Edit** and click **Add Recipient- Donor Link**.

A screenshot of a web interface showing a tab labeled "Recipient-Donor Links" and a button labeled "Add Recipient-Donor Link".

14. Select **Recipient 1** from the drop down.

A screenshot of a dialog box titled "Add Recipient-Donor Link". It contains a dropdown menu labeled "Name of Person *" with "Please Select..." as the current selection. Below the dropdown is a search input field and a table of recipient data.

Please Select...					
alCEt	isYkp	0084603	16/08/1968	Female	NSW

15. Click **Add**.

A screenshot of two buttons: a white "Cancel" button and a teal "Add" button.

16. Click **Save**.

17. Click **Match Profile**.

18. Click **Enrolments for transplant**.

19. Under the Heart LDD enrolment, click **Proceed to matching**.

20. Tick the **Select for Matching** check box for Recipient 1.

21. Click **Match**.

22. Once the match is complete click **View Match Event**.

23. Complete the Histocompatibility assessment.

For further information see [Match Event Assessments- Laboratory Portal, OM-009](#).

6. TRANSPLANT WAITING LIST MATCHING SCREEN

The **Transplant waiting list matching** screen is displayed after the **Proceed to matching** button is clicked and after TWL matching has occurred.

Organ Program	Algorithm	Rank	Score	Last Name	First Name	OM Lab	DoB	Age(Years)	Compatibility Status	Transplant Hospital	Published Status
Kidney	National Algorithm	1	95.001.156					44	Eligible for offer	John Hunter Hospital - Renal Unit	Published
Kidney	National Algorithm	2	95.001.011					59	Eligible for offer	Royal Melbourne Hospital - Renal Unit	Published

By default, OrganMatch displays all matches that generated using the Kidney National algorithm and the top 30 recipient matches for the other Kidney Algorithms. The number to display can be expanded to any number between 30 and 400, by clicking on **Number of Matches to Display**.

The **Match Run Log** displays information about when the matching algorithm was run and the user who matched. When the **Match Run Log** is clicked, a pop-up table displays the information relating to the matching for the donor.

Organ Program	Matching OM Lab	Type of Matching	Algorithm Selected	Match Executed By	Match Run Date Time	Re-run?	Reason for Re-run
Kidney	NSW	Algorithm matching	Kidney Standard v2	[REDACTED]	20/04/2023 15:07	No	N/A

1 record(s) found

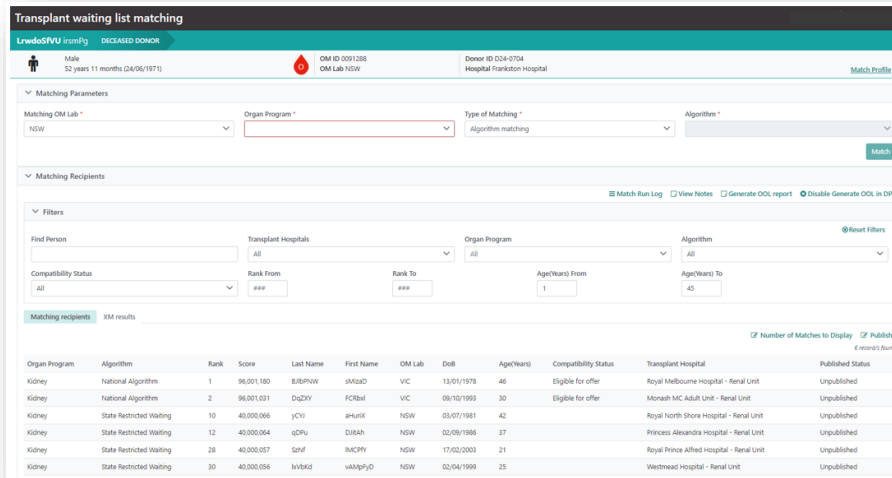

« < 1 > » 5 ▾

Close

There are two tabs displayed in the screen, **Matching recipients** and **XM results**.

The **Matching recipients** tab has a list of ranked recipients created as a result of matching. The filters can be used to define a set of criteria for the recipients to be displayed.

The filter for age restriction does not apply to recipients that are matched on the Kidney National Algorithm, so all national matches that are compatible are included regardless of age criteria. For examples if the user adds 1 in the **Age (Years) From** field and 45 in the **Age (Years) To** field, the rank 1 recipient will still display.

The age filters should be cleared prior to generating an Organ Offer List (OOL) report.

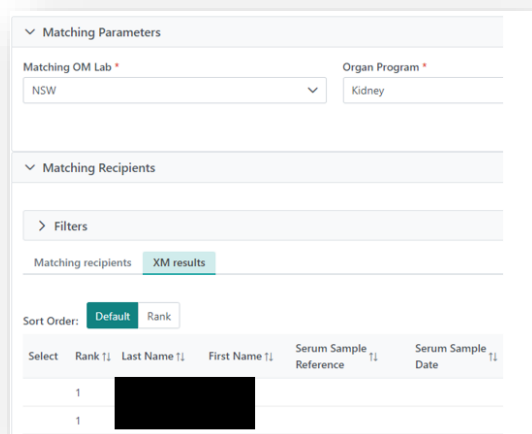

Clicking on a row will navigate to the match event for the donor and recipient.

For further information see [Match Event Assessments- Laboratory Portal, OM-009](#).

6.1 ADDING RESULTS IN XM RESULTS TAB

Flow crossmatch results performed prospectively can be added to the donor record via the **XM results** tab. Refer to [Flow Crossmatch Clinical Guidance](#) document for more information on when Flow crossmatching may be required.

1. From the **Transplant waiting list matching** screen, click the **XM results** tab.

2. Click **Edit** to add crossmatch results.

3. The XM results tab will auto populate with 1 row for FXM-T-IgG and 1 row for FXM-B-IgG and the following fields are set with default values:

- Rank from the OOL section of the TWL matching screen for that recipient.
- Last Name from the OOL section of the TWL matching screen for that recipient.
- First Name from the OOL section of the TWL matching screen for that recipient.
- Cell Sample Reference - Most recent Cell sample reference for the donor.
- Cell Sample Date.
- Cell Treatment - default to "Pronase".
- Crossmatch Type – FXM-T-IgG/FXM-B-IgG.
- Additive - default to "Neat".

4. Add the crossmatch results by populating the below fields as required:

- Serum Sample Reference
- Result
- Channel Shift from Threshold
- XM Date
- Result Score
- Additive
- Test Reference

Note: XM Date is a mandatory field and needs to be populated for any results appearing in the table before saving. To enter results for a specific recipient, filter the results by searching for the recipient in the **Find Person** filter.

5. Select the test result row and click **Duplicate** to make a duplicate of the row. The duplicate is shaded green.

Select	Rank	Last Name	First Name	Serum Sample Reference	Serum Sample Date	Result	Verified	Channel Shift from threshold	Cell Sample Reference	Cell Sample Date	Cell Treatment	Crossmatch Type	XM Date
<input type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Please Sele...	✖		534524035	20/03/2023	Pronase	FXM-T-IgG	21/03/2023
<input type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Please Sele...	✖		534524035	20/03/2023	Pronase	FXM-T-IgG	21/03/2023

6. The duplicate row created can also be deleted by selecting the row and clicking **Delete**.

Select	Rank	Last Name	First Name	Serum Sample Reference	Serum Sample Date	Result	Verified	Channel Shift from threshold	Cell Sample Reference	Cell Sample Date	Cell Treatment	Crossmatch Type	XM Date
<input type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Please Sele...	✖		534524035	20/03/2023	Pronase	FXM-T-IgG	21/03/2023
<input checked="" type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Please Sele...	✖		534524035	20/03/2023	Pronase	FXM-T-IgG	21/03/2023

7. Click the **Verify All** button to verify all the crossmatch results entered on the screen. Results need to be verified to appear in the match event assessment.

For further information see [Match Event Assessments- Laboratory Portal, OM-009](#).

8. Click **Yes**.

9. If the results need to be modified, click **Edit** and select crossmatch results to updated and click **Unverify**.

A screenshot of the Organmatch Laboratory Portal interface showing a table of crossmatch results. The table has columns for Select, Rank, Last Name, First Name, Serum Sample Reference, Serum Sample Date, Result, Verified, Channel Shift from threshold, Cell Sample Reference, Cell Sample Date, Cell Treatment, Crossmatch Type, and XM Date. There are two rows of data, both with a "Negative" result and a checked "Verified" status. The "Last Name" and "First Name" columns are redacted with black boxes. Above the table, there are buttons for "Unverify", "Unverify All", "Delete", and "Duplicate". In the top right corner, there is an "Edit" button and a "2 records found" indicator.

Select	Rank	Last Name	First Name	Serum Sample Reference	Serum Sample Date	Result	Verified	Channel Shift from threshold	Cell Sample Reference	Cell Sample Date	Cell Treatment	Crossmatch Type	XM Date
<input type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Negative	✓		S3432435	20/03/2023	Pronase	FXM-T-igG	21/03/2023
<input checked="" type="checkbox"/>	1	[REDACTED]	[REDACTED]	S-23-840-A	01/03/2023	Negative	✓		S3432435	20/03/2023	Pronase	FXM-B-igG	21/03/2023

10. Click **Yes** to confirm the unverification.

Once crossmatch results have been entered and match event assessments have been completed, the Organ Offer List (OOL) can be generated by clicking **Generate OOL report**.

For further details on the OOL see [Report Generation- Laboratory Portal, OM-007](#).

APPENDIX 1: READINESS CRITERIA FOR DECEASED DONORS

Criteria	Donor Requirements
HLA typing	Authorised for: <ul style="list-style-type: none"> • HLA-A – 1 field • HLA-B – 1 field • HLA-DRB1 – 1 field
Location	OM Lab entered
Samples	<ul style="list-style-type: none"> • ABO final and ABO confirmed • Extended Acceptance Criteria Verified (if applicable)
Height & Weight	<ul style="list-style-type: none"> • Height (cm) • Weight (kg)

APPENDIX 2: NOT COMPATIBLE REASONS

Not Compatible Reason	Scenario
Eplet Match	Select when a recipient is excluded from the list as the transplant unit is wanting a better match for the recipient.
HLA Mismatches	Select when a recipient is excluded from the list as the transplant unit has specified the number of mismatches they will accept. For example, the transplant unit has specified they want the recipient and donor to be matched at DRB1.
Unacceptable Antigen	Select when a recipient is excluded from the list due to an unacceptable antigen against the donor. This is used in the case where there may be recipient acceptable antigens listed, and a scientist decision for compatibility is required.
Logistics	Select where a recipient is excluded from the list due to logistics with a donor. For example, if a donor organ cannot be offered interstate due to prolonged cold ischaemic time.
Recipient criteria Donor Age acceptance	Select where a recipient is excluded from the list due a donor age restriction as specified by the transplant unit. For example, a young recipient may require a donor not over a certain age which the unit will specify.
Donor Age Restriction for allocation	Select where a recipient is excluded from the list due an age restriction on the donor. For example, Donate Life have directed the lab to only match against recipients over 65 years of age.
Donor Issues	Select where a recipient is excluded from the list due to a medical issue relating to the donor.
Pre-emptive listing	Select where a recipient is excluded from the list as they are not on dialysis.
Other	Select where a recipient is excluded from the list for any other reason not specified in the dropdown selections.
IVRD -Recipient not consented	Select when recipient has not been consented to accept IVRD and donor has been flagged as IVRD
On Advice of Transplant Unit	Select when the transplant unit has advised they won't accept any offers from the donor. Specific reason to be added to the comments.

Donor Recipient Size Mismatch	Select when the recipient is excluded due to the size or weight of a donor. For example, a young recipient may require a small donor not above a certain weight threshold.
